

APFC

automatic power factor correction

We produce a complete range of **automatic power factor correction systems** that provide important benefits to industrial plants.

Thanks to reliable capacitors and an accurate electronic control system, voltage drops and losses are minimised, improving efficiency and extending components' lifetime. The benefits of our products translate both in an immediate bill drop and in a systematic increase in power quality to correctly feed the local electrical components.

- High energy efficiency
- Reduction of losses and cost
- Total automation

	Power	Use	Application
ES	11-1200 kVAr	For low THDI	Arc furnaces Chemical baths Data centers Oil rigs
ER	9-1100 kVAr	For high THDI	
EF	30-1270 kVAr	With Harmonic filter	
FIX	18-90 kVAr	Fix power factor correction system
